Reply to “FAIR chemical structure in the Journal of Cheminformatics”

Rajarshi Guha¹ , Nina Jeliakova² , Egon Willighagen^{3*} and Barbara Zdrazil⁴

Schymanski and Bolton [1] requests the adoption of a FAIR approach to improve the FAIRness (findability, accessibility, interoperability, reusability) of chemical structures in the Journal of Cheminformatics. Currently, our journal encourages open science practices, but at the same time does not provide much guidance on how to implement these practices. Because FAIR chemical data is important [2], we welcome the open standard proposal and intend to adopt it as recommendation to authors.

Specifically, we will update the author guidelines that authors can improve the FAIRness by opting-in to provide chemical structures in open data associated with our journal articles in this format. For submissions where data is already provided in a FAIR format, an index file in this format can be provided. Second, we will make reviewers aware of this new, optional open standard.

While we agree with the importance of FAIR data, we also foresee practical complications when making this obligatory for all articles. Particularly, for the Database article type, the proposal may be both redundant to existing editorial standards as well as problematic for really large datasets as used in, for example, Probst and Raymond [3].

As a result, rather than require, we strongly recommend that authors include structure data in open, machine readable formats and identifiers, and point towards Schymanski and Bolton [1] as a means of doing so.

Authors' contribution

All authors were involved in designing and writing this reply and all read and approved the final manuscript.

Competing interests

All authors are editors for the Journal of Cheminformatics and have a contract with SpringerNature. Adoption of this new standard is expected to result in more data reuse, which has a positive impact on the number of citations that articles that provide the data get, which in turn benefits the journal and the publisher.

Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.

Ready to submit your research? Choose BMC and benefit from:

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100M website views per year

At BMC, research is always in progress.
